SUMMARY

Identity and access specialist who owns the technical success of enterprise customers on a CIAM platform (Frontegg). I lead SSO, SAML and OAuth/OIDC integrations end to end, drive root cause analysis with engineering, and turn complex authentication problems into clean go-lives. Background as a consulting team lead at Deloitte, plus hands-on full-stack development (React, Node, TypeScript), so I bridge product, engineering and customers at both the account and code level.

WORK EXPERIENCE

Product Expert (Identity & Access) — Support Your App | Apr 2024 - Present

- Led end-to-end SSO, SAML and OAuth/OIDC integrations for enterprise customers, owning the process from technical scoping to production go-live.
- Served as the technical point of contact for complex identity implementations (multi-tenancy, SCIM provisioning, JWT, webhooks), reducing time to resolution on escalated cases.
- Drove root cause analysis with engineering on SDK, token, permission and tenant-management issues, using log and trace analysis to isolate the fix.
- Partnered with engineering to reproduce and validate defects, building proof-of-concept apps to confirm behavior and unblock customers.
- Authored internal documentation and knowledge-base articles that improved developer experience and cut repeat questions across the team.
- Reframed recurring customer problems into product feedback, influencing workflow and documentation improvements.

IT Consulting Analyst & Team Lead — Deloitte | Apr 2022 - Apr 2024

- Led a cross-functional team through the full delivery lifecycle of data interfaces, coordinating engineers and onboarding and training new hires.
- Owned the design and implementation of ETL pipelines and SQL data interfaces for enterprise clients, including performance optimizations in production.
- Built validation scripts and analytical queries to guarantee data quality in production environments.
- Used Go to build internal tooling and services supporting data-interface delivery.

Freelance Web Developer | Dec 2023 - Present

- Design and ship modern JavaScript web applications and APIs (React, Node, TypeScript) for real clients, so I understand the systems I support at the code level. Portfolio: franciscogaetano.com

SKILLS

- **Identity & Access:** OAuth 2.0, OpenID Connect, SAML, SCIM, JWT, SSO, MFA, multi-tenancy, webhooks
- **Platforms:** Frontegg, Auth0/Okta (concepts), CIAM integrations
- **Engineering:** TypeScript, JavaScript, Node.js, React, Python, Go, SQL, REST APIs
- **Tools:** Git, Jira, Zendesk, DevRev, Coralogix (log analysis), Postman
- **Ways of working:** Customer-facing delivery, cross-functional coordination, Agile / Scrum

EDUCATION

Digital House — Full Stack Web Developer (2023)

University of Buenos Aires — Bachelor's Degree in Accounting (2017–2021)
